

1 Summary

2 Housing Land Supply

3 Commentary

4 Monitoring data

Appendix 1 - Site Schedules

Appendix 2 - Past Completions Data

Appendix 3 - Previous Land Supply Data

Appendix 4 – Planning Inspector’s Recommendation

1.8 The Blaenau Gwent UDP period expired in July 2011 during the study

2.4

The contribution from small sites of less than 10 dwellings is based on the completions for the last five years.

53	53	24	8	23	

- The small sites 5 year allowance is 161
- The small sites 5 year annual average is $(161/ 5 = 32)$

2.5 Overall total 5 year land supply (large + small sites) is ____ (733 + 161).

(Using the 10 year Past Build Rate Method: Blaenau Gwent Unitary Development Plan 2002-2012)

3.1 TAN 1 states that where an adopted Plan is in place it is expected that the residual method will be used. Blaenau Gwent Unitary Development Plan expired in July 2011. Blaenau Gwent Council sought guidance from TAN 1 which allows for the average annual provision from the last 5 years to be extrapolated to give an estimate of the land requi

4.1 TAN 1 requires the JHLAS report to provide additional information on the development of land for housing covering the use of previously developed land, the use of sites subject to flood risk constraints and the type of housing being developed, i.e. houses, flats or other. This data is set out below.

TOTAL			1200

Adroddiad ar gyd-

to a change in the way that completion data was recorded around 2006, the timeframe for the calculation of the updated past build rate figure is actually 10.25 years. The further information confirmed that, in line with TAN 1 Para 7.1.5, the small site allowance in the SoCG is based on the contribution from such sites over the past five years.

Main Issue

5. There is agreement with regard to the details of all of the sites included within the JHLAS schedule, resulting in agreement as to the number of housing units to be included within the 5-year land supply. The main issue is the appropriate evidence to be used to reach the number of years of land supply that the agreed number of units represents.

Reasons

6. At the time of the base date of the study, and notwithstanding the progress of the Local Development Plan (LDP), there was no adopted development plan in place. In these circumstances, and in line with the advice in TAN 1, a comparison of available land with past building rates should be used.
7. The LPA have provided a land supply figure calculation utilising the past build rate methodology, based on an approximate 10 year timeframe. HBF acknowledge that this is in line with the Welsh Government (WG) Guidance Note on the JHLAS process (Version 2 – September 2012). However the HBF state that the past build rate does not adequately reflect the level of development needed over the next 5 years and consider that the evidence used in the preparation of the LDP should be used. Nonetheless, at the time of the study base date the LDP had yet to be found sound. In addition, new LDP housing allocations are not included in the current schedules. I do not therefore consider it appropriate to use the LDP evidence at this time. Paragraph 7.5.4 of TAN 1 makes reference to utilising up to date data from a deposited LDP if all members of the Study Group agree. However, that provision is made for instances where an older adopted plan covers the whole of the JHLAS period, and therefore does not apply in this case.
8. In the absence of an adopted plan, and in line with TAN 1 and WG guidance, I conclude that the past build rate methodology is the appropriate method to be used in this case.

Conclusion

9. Having regard to the agreed housing supply of 894 units and the average build rate of 117 units over the past 10.25 years, I conclude that the 2012 JHLAS housing land
